The Aliens and the Scalpel : Scientific Proof of Extraterrestrial Implants in Humans (New Millennium Library, V. 6) Roger K. Leir
This compelling and intriguing work takes a serious look at the scientific and medical aspects of the alien abduction phenomena. It is a story of not only scientific research but explains how the author, who started as the consummate scientific skeptic, became thoroughly convinced that humans all over this planet are being tampered with by another intelligence. He also believes that our historical record proves this has gone on for thousands of years. This is more than a story of scientific research as it reaches into the very depths of the author's thoughts as he travels down the hard and torturous road of investigative procedure. For the first time he tells of his own involvement with the Near Death Experience and explains the details of these events. He also describes what may very well have been a personal experience involving the alien abduction phenomena. The book brings out the human side of all those who participated in the surgical quest for knowledge. This includes the personal feelings of his patients who are considered the most precious component of this story. In addition it will take the reader on a journey through not only the surgeries themselves but will also illustrate the practical aspects of biological and metallurgical research. The author is a Podiatric Physician and Surgeon who has been in private practice for thirty four years. He was urged by his family and particularly his very close cousin, Dr. Kenneth Ring, author and leading authority in Near Death Experience, to pursue this investigation into the alien abduction phenomena. It has been said by those who have read this manuscript, "This book should be on everyone's reading list and the shelves of every home and public library."
