Self and Process: Brain States and the Conscious Present Jason W. Brown
This book extends the microgenetic theory of cognition, developed out of a neuropsychological case study, to the philosophy of mind. The theory attempts to account for the brain's organization of language, action, perception, affect and memory along the same lines, and is extended here to problems of the nature of the self, free will, consciousness, feeling and value, the psychology of time and nature of change and the relationship that exists between the mind and the brain. The title points to the argument that all life, past experience, future hopes and the ongoing present are played out in the present moment; that a description of mental activity is ultimately a description of the continuously changing present. This monograph on neuropsychology, cognitive psychology, theoretical psychology and philosophy is intended for cognitive psychologists, theoretical psychologists, neuropsychologists and philosophers.
