Analysis and Design of Standard Telerobotic Control Software

Matthew L. June

Analysis and Design of Standard Telerobotic Control Software Matthew L. June
This is a AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH SCHOOL OF ENGINEERING report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A006323. The abstract provided by the Pentagon follows: The Robotics and Automation Center for Excellence (RACE) has defined an open telerobotics control architecture. This architecture, called the Unified Telerobotic Architecture Project (UTAP), is a proposed standard for all Air Force telerobotic systems. Implementation of UTAP will reduce the cost of robotic applications by increasing software modularity, portability, and reusability. This thesis continued the effort to prove the feasibility of UTAP. In December, 1995, 1st Lt Anchor implemented a portion of the UTAP specification on a PUMA robot. The UTAP-compliant controller exhibited some degradation in the system performance. However, the performance degradation was not fully measured. This thesis extended the measurements of Anchor's implementation. Additionally, a portion of the UTAP specification was implemented on an Adept 550 manipulator and the performance effects were measured. The implementation included portions of the generic, robot/axis servo control, tool control, sensor control, programmable 10, subsystem task level control, task description and supervision, parent task program sequencer, task program sequencer, and object knowledge modules. Performance measurements of this implementation indicated that, although performance was adversely affected, the degradation was caused by the interface between the UTAP-compliant application and the non-UTAP-compliant operating system. There was little difference between the complaint and non- compliant applications.

From reader reviews:

Sandra Murray:

Typically the book Analysis and Design of Standard Telerobotic Control Software has a lot associated with on it. So when you read this book you can get a lot of profit. The book was written by the very famous author. Tom makes some research prior to write this book. That book very easy to read you may get the point easily after scanning this book.

Timothy McCormack:

You can spend your free time to see this book this reserve. This Analysis and Design of Standard Telerobotic Control Software is simple to bring you can read it in the park, in the beach, train in addition to soon. If you did not have much space to bring the particular printed book, you can buy typically the e-book. It is make you simpler to read it. You can save the particular book in your smart phone. Consequently there are a lot of benefits that you will get when you buy this book.

Dustin Davis:

A lot of reserve has printed but it is different. You can get it by internet on social media. You can choose the top book for you, science, comedian, novel, or whatever by searching from it. It is referred to as of book Analysis and Design of Standard Telerobotic Control Software. You can add your knowledge by it. Without leaving the printed book, it may add your knowledge and make anyone happier to read. It is most crucial that, you must aware about book. It can bring you from one destination for a other place.

James Rohrbach:

What is your hobby? Have you heard in which question when you got college students? We believe that that problem was given by teacher to the students. Many kinds of hobby, Every individual has different hobby. And you know that little person such as reading or as examining become their hobby. You have to know that reading is very important along with book as to be the point. Book is important thing to add you knowledge, except your personal teacher or lecturer. You see good news or update about something by book. Numerous books that can you take to be your object. One of them are these claims Analysis and Design of Standard Telerobotic Control Software.
