Technologies to Enable Autonomous Detection for BioWatch: Ensuring Timely and Accurate Information for Public Health Officials : Workshop Summary National Research Council, Institute of Medicine, Board on Life Sciences, Board on Health Sciences Policy

The BioWatch program, funded and overseen by the Department of Homeland Security (DHS), has three main elements--sampling, analysis, and response--each coordinated by different agencies. The Environmental Protection Agency maintains the sampling component, the sensors that collect airborne particles. The Centers for Disease Control and Prevention coordinates analysis and laboratory testing of the samples, though testing is actually carried out in state and local public health laboratories. Local jurisdictions are responsible for the public health response to positive findings. The Federal Bureau of Investigation is designated as the lead agency for the law enforcement response if a bioterrorism event is detected. In 2003 DHS deployed the first generation of BioWatch air samplers. The current version of this technology, referred to as Generation 2.0, requires daily manual collection and testing of air filters from each monitor. DHS has also considered newer automated technologies (Generation 2.5 and Generation 3.0) which have the potential to produce results more quickly, at a lower cost, and for a greater number of threat agents.

Technologies to Enable Autonomous Detection for BioWatch is the summary of a workshop hosted jointly by the Institute of Medicine and the National Research Council in June 2013 to explore alternative cost-effective systems that would meet the requirements for a BioWatch Generation 3.0 autonomous detection system, or autonomous detector, for aerosolized agents . The workshop discussions and presentations focused on examination of the use of four classes of technologies--nucleic acid signatures, protein signatures, genomic sequencing, and mass spectrometry--that could reach Technology Readiness Level (TRL) 6-plus in which the technology has been validated and is ready to be tested in a relevant environment over three different tiers of temporal timeframes: those technologies that could be TRL 6-plus ready as part of an integrated system by 2016, those that are likely to be ready in the period 2016 to 2020, and those are not likely to be ready until after 2020. *Technologies to Enable Autonomous Detection for BioWatch* discusses the history of the BioWatch program, the role of public health officials and laboratorians in the interpretation of BioWatch data and the information that is needed from a system for effective decision making, and the current state of the art of four families of technology for the BioWatch program. This report explores how the technologies discussed might be strategically combined or deployed to optimize their contributions to an effective environmental detection capability.

From reader reviews:

Debbie Luken:

Now a day people that Living in the era where everything reachable by match the internet and the resources inside can be true or not involve people to be aware of each details they get. How individuals to be smart in receiving any information nowadays? Of course the solution is reading a book. Looking at a book can help individuals out of this uncertainty Information mainly this Technologies to Enable Autonomous Detection for BioWatch: Ensuring Timely and Accurate Information for Public Health Officials : Workshop Summary book as this book offers you rich info and knowledge. Of course the data in this book hundred per cent guarantees there is no doubt in it you may already know.

Herman Pruitt:

Reading a book tends to be new life style with this era globalization. With reading you can get a lot of information that will give you benefit in your life. Together with book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Lots of author can inspire their very own reader with their story or perhaps their experience. Not only the story that share in the textbooks. But also they write about advantage about something that you need case in point. How to get the good score toefl, or how to teach your children, there are many kinds of book that you can get now. The authors these days always try to improve their expertise in writing, they also doing some analysis before they write with their book. One of them is this Technologies to Enable Autonomous Detection for BioWatch: Ensuring Timely and Accurate Information for Public Health Officials : Workshop Summary.

Stephen Comerford:

Many people spending their time by playing outside with friends, fun activity with family or just watching TV 24 hours a day. You can have new activity to spend your whole day by studying a book. Ugh, ya think reading a book really can hard because you have to use the book everywhere? It all right you can have the e-book, getting everywhere you want in your Mobile phone. Like Technologies to Enable Autonomous Detection for BioWatch: Ensuring Timely and Accurate Information for Public Health Officials : Workshop Summary which is obtaining the e-book version. So , why not try out this book? Let's observe.

Judy Williams:

You can get this Technologies to Enable Autonomous Detection for BioWatch: Ensuring Timely and Accurate Information for Public Health Officials : Workshop Summary by go to the bookstore or Mall. Simply viewing or reviewing it might to be your solve issue if you get difficulties on your knowledge. Kinds of this book are various. Not only simply by written or printed but can you enjoy this book through e-book. In the modern era similar to now, you just looking by your local mobile phone and searching what your

problem. Right now, choose your personal ways to get more information about your reserve. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose suitable ways for you.
