Organizing and Collecting: The Number System (Contexts in Learning Mathematics, Grades K-3: Investigating Number Sense, Addition, and Subtraction) Nina Liu, Maarten Dolk, Catherine Twomey Fosnot

Organizing and Collecting: The Number Systemis one of eight units in the *Contexts for Learning Mathematics' Investigating Number Sense, Addition, and Subtraction* (K-3)

This unit begins with the story of the Masloppy family-an endearing, large family that finds it difficult to keep track of things. Everyone is forever losing, misplacing, and looking for things. One of the children, Nicholas, decides to sort, organize, and take inventory of things in the house. He counts and bundles materials and labels containers and baskets, and life in the Masloppy household is smoother thereafter.

The idea of taking inventory is brought to the classroom, where children work to count and label baskets of supplies and materials. The discussion focuses on organizing in groups and skip counting, then specifically on groups of ten. The concept of place value is developed as the children pack objects into groups of ten and study patterns in the data. There are opportunities to deepen their understanding by packing in fives and playing games that focus on groups of ten, and there are minilessons that use the ten-frame as a visual model of five and ten. (The structure of the ten-frame is similar to that of the arithmetic rack, which is discussed in *The Double-Decker Bus* (previous unit).Both units use five and ten as landmark numbers: the arithmetic rack has four groups of five arranged in two rows of ten, the ten frame has two groups of five. The ten-frame is used in this unit because it resembles the context of packing more closely.) In the second week the inventory context is extended to include ordering more classroom supplies as a way to develop and support addition strategies, which include jumping to friendly numbers (multiples of ten) and jumping by ten.

As children pack and count groups of items, they begin to unitize-to count groups and objects at the same time. Children develop an understanding of place value as they construct the idea that the number of packs and loose items is related to the total number of objects and that the numbers change when items are added to make full packs or when a pack of ten is added.

The game Collecting Stamps and its variations are included in this unit. These can be played throughout the year as a way for children to develop place value and addition strategies. The game and its variations extend composing and decomposing strategies while promoting understanding of equivalence-for example, representing 26 + 8 as equal to 26 + 4 + 4.

From reader reviews:

Mary Marshall:

Have you spare time to get a day? What do you do when you have considerably more or little spare time? That's why, you can choose the suitable activity for spend your time. Any person spent their own spare time to take a move, shopping, or went to the actual Mall. How about open or even read a book titled Organizing and Collecting: The Number System (Contexts in Learning Mathematics, Grades K-3: Investigating Number Sense, Addition, and Subtraction)? Maybe it is to be best activity for you. You realize beside you can spend your time with your favorite's book, you can better than before. Do you agree with the opinion or you have other opinion?

Mathew Jones:

What do you about book? It is not important together with you? Or just adding material when you want something to explain what the ones you have problem? How about your extra time? Or are you busy particular person? If you don't have spare time to try and do others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Every individual has many questions above. They should answer that question because just their can do this. It said that about publication. Book is familiar on every person. Yes, it is suitable. Because start from on pre-school until university need this particular Organizing and Collecting: The Number System (Contexts in Learning Mathematics, Grades K-3: Investigating Number Sense, Addition, and Subtraction) to read.

John Merritt:

Do you have something that you prefer such as book? The guide lovers usually prefer to pick book like comic, short story and the biggest one is novel. Now, why not attempting Organizing and Collecting: The Number System (Contexts in Learning Mathematics, Grades K-3: Investigating Number Sense, Addition, and Subtraction) that give your pleasure preference will be satisfied by simply reading this book. Reading addiction all over the world can be said as the means for people to know world far better then how they react in the direction of the world. It can't be explained constantly that reading behavior only for the geeky particular person but for all of you who wants to be success person. So , for all you who want to start reading as your good habit, you are able to pick Organizing and Collecting: The Number System (Contexts in Learning Mathematics, Grades K-3: Investigating Number Sense, Addition, and Subtraction) become your starter.

Sallie Farris:

The book untitled Organizing and Collecting: The Number System (Contexts in Learning Mathematics, Grades K-3: Investigating Number Sense, Addition, and Subtraction) contain a lot of information on that. The writer explains the woman idea with easy approach. The language is very clear to see all the people, so

do not necessarily worry, you can easy to read this. The book was written by famous author. The author provides you in the new period of time of literary works. You can actually read this book because you can read more your smart phone, or model, so you can read the book with anywhere and anytime. In a situation you wish to purchase the e-book, you can wide open their official web-site along with order it. Have a nice study.
